

Local Agenda NW

Justin Davidson

3/4/09

Vision

I envision a world that has a sustainable food system.

Problem

The current global food system is unsustainable.

Manifesto

1. **Produce food in a way that is harmonious with natural systems.** Become a part of the natural cycle not a destructive force hindering the cycle.
2. **Connect communities to the food they consume.** A deep understanding of where our food comes from will help protect a sustainable process and bring communities closer together.
3. **Eliminate waste from the process.** Find a creative use for everything produced, turn possible problems into useful resources.
4. **Establish universal access to nutritious fresh food.** Good food should not be a luxury for the wealthy.
5. **Prioritize local resources.** Growing food should boost local vitality.
6. **Mimic natural cycles.** Sustainable innovative solutions have already been established by nature, embrace them.
7. **Innovate constantly.** The perfect solution has not been developed yet, constantly search for it.
8. **Utilize renewable energy sources.**
